

Introduction

I have secured a placement at a local web design agency. My first project is for a client, the "Burnley Community Arts Festival," who are organising a new annual event.

The festival organisers need a professional online presence to promote the event, provide information to visitors, and showcase the artists involved. They are a non-profit organisation with a limited budget and technical expertise

I have been asked to design, create and test a website that will meet the client and user requirements.

Design

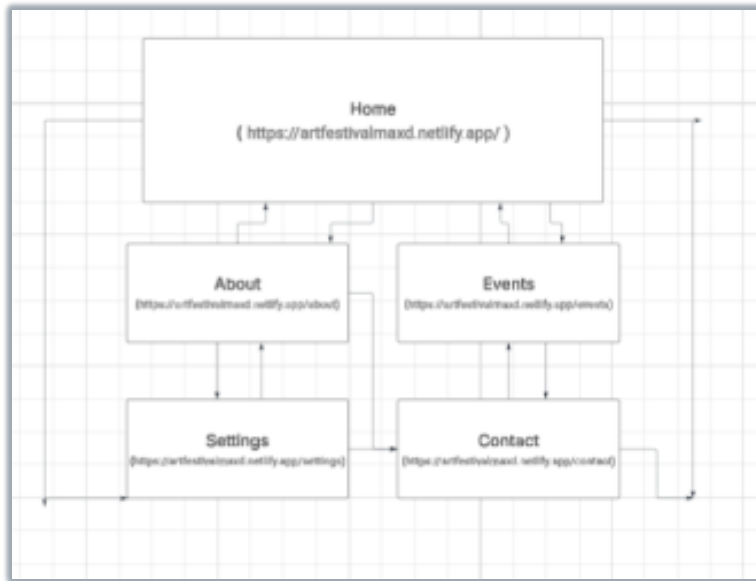

This report is going to discuss the Burnley Community's Arts Festival. The festival organisers require a professional online presence that is going to promote the festival. This report will include client and user requirements, site maps, designs (1 original, 1 alternate), technical documentation (asset table, test table and user feedback forms) It will also include the development of the website, design choices made, justifications for those design choices and comparisons to other well-known website design's and finally will end on a conclusion discussing what went well, what didn't go well and how I would improve.

User Requirements

- Easily find key information about events
- Navigate the site easily
- See images of past events/artwork
- Access website on different devices (responsive design)
- Contact organisers
- Google Maps of event
- Contact form available

Site map

A roadmap of a website that lists its pages together and the relationships between them.

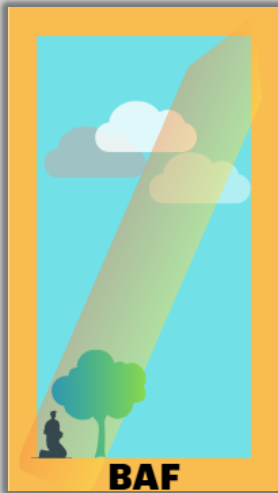

Asset table

Table used to store assets used in the development of the website.

Asset	Content	Link

Alternate designs

Screenshots of my Lucid chart planning of the website's layout alternate version, including the CSS and HTML formatting. All CSS and HTML is on the first Home page and then the rest only display the new CSS and HTML.

Screenshots

Home

Button Animation -

```
.nav-left img {  
  height: 90px;  
  width: auto;  
  transition:  
    transform 0.2s  
    ease, opacity 0.2s  
    ease;  
}
```

Navigation Bar -

```
.topnav {  
  background-image:  
    url("assets/banner.png");  
  border: 1px solid rgb(250,  
    182, 55);  
  background-color: #eeba2b;  
}
```

Navigation Bar has an image banner and an orange border.

Google Maps Embed for Burnley -

```
<iframe  
src="https://www.google.com/maps/embed"  
  allowfullscreen  
  loading="lazy">  
</iframe>
```

Background -

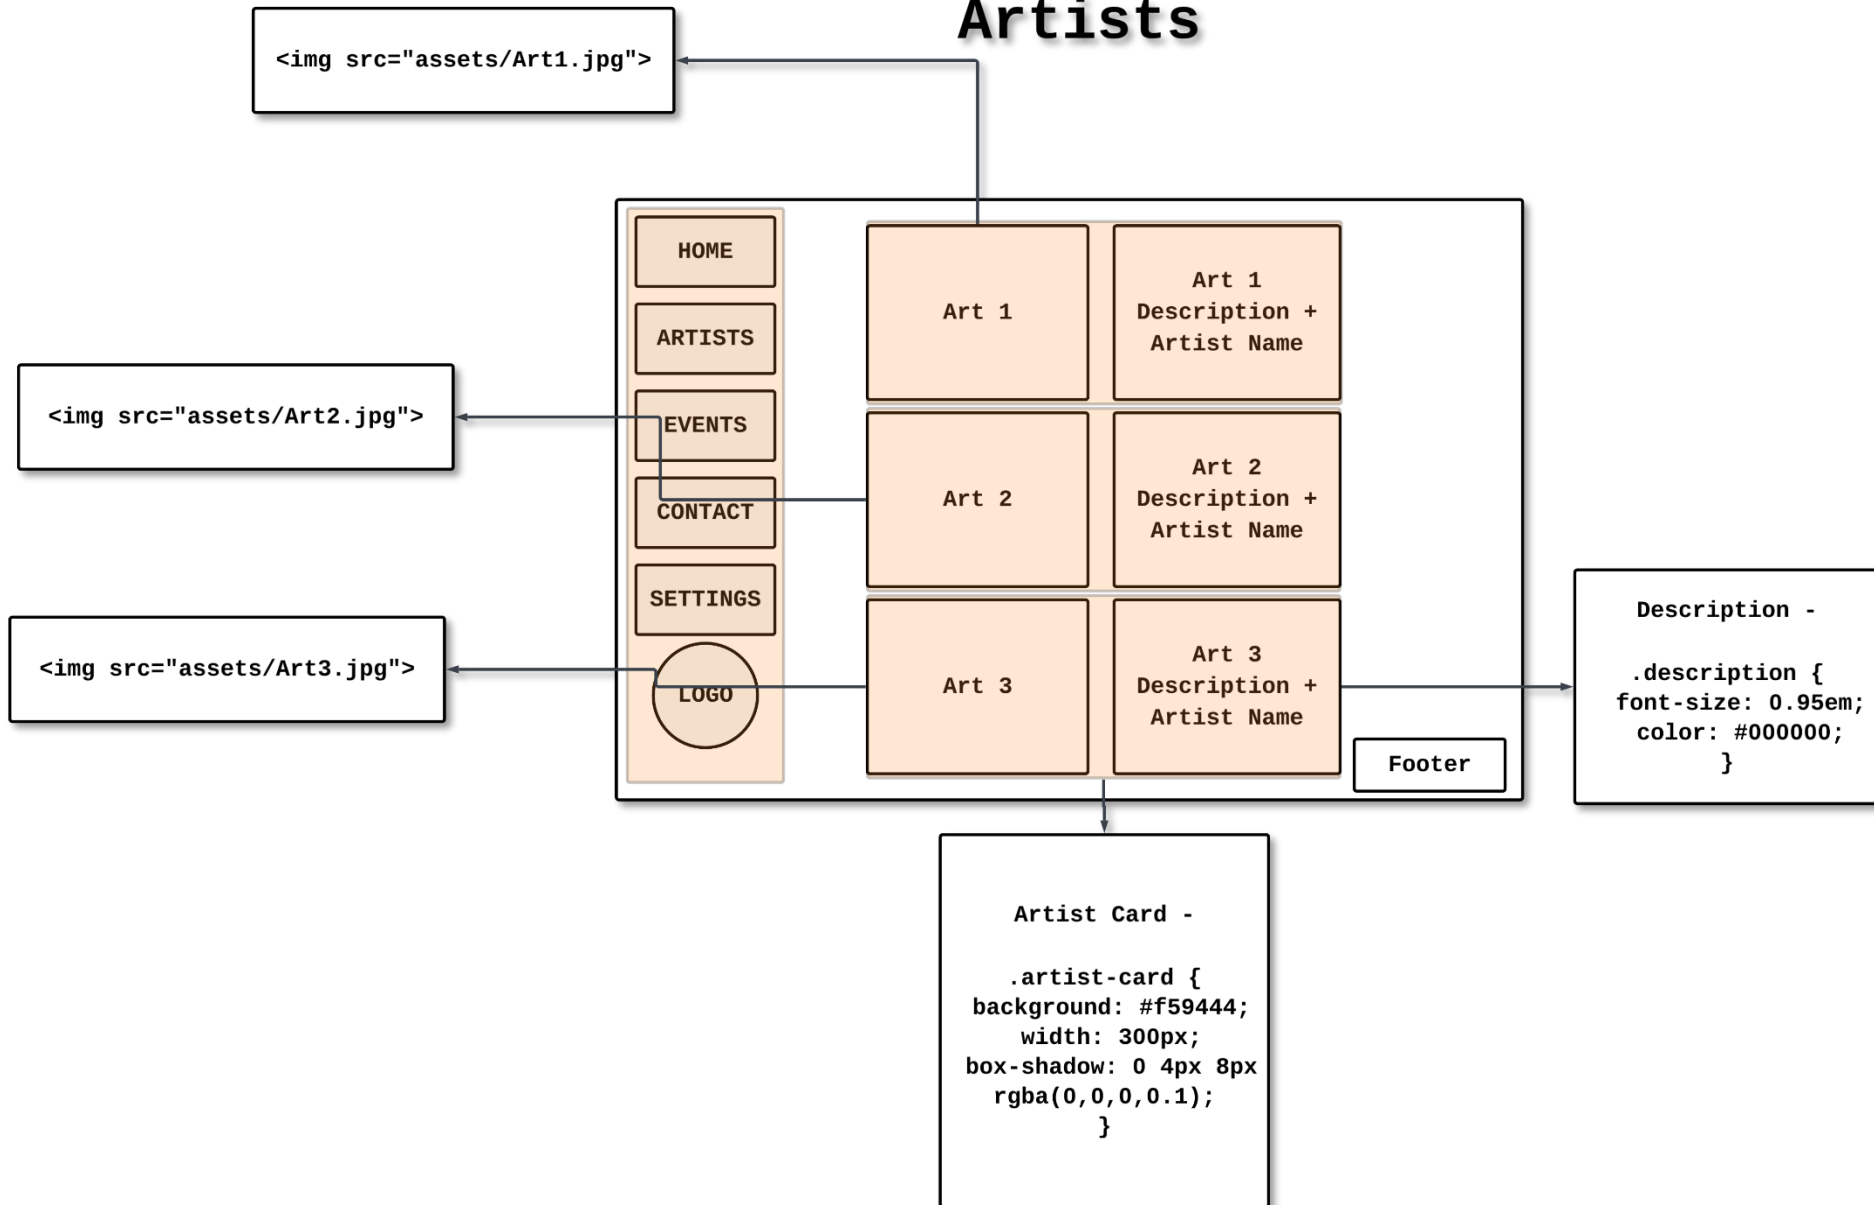

```
body{  
  background:  
    linear-gradient(90deg,  
    #f57207 0%, #d8701a 100%);  
  font-family: 'Franklin  
    Gothic Medium', 'Arial  
    Narrow', Arial, sans-serif;
```

Body is used as a baseline for every page so all of these css effects occur on every page using body.

Footer -

```
footer {  
  position:  
    relative;  
  width:  
    100%;  
  color:  
    white;  
  text-align:  
    left;  
  padding:  
    10px 20px;  
}
```

Come join in with our wonderful events!

Burnley's Community Art Festival offers a large range of events for different demographics throughout the year, read below to learn more about locations and dates.

Image

The Art Gallery and Marching Band

Throughout the week of 04/05/26 through to 11/05/26, we will be offering a chance to look at art from some of our incredible local artists in the Artists section of the website completely free of charge, bring your children and friends. This event will be taking place at Burnley's Town Centre with signs there to guide the way. Come watch the Burnley Marching Band walk through Burnley's city centre and hear the trumpets being played! Begins 5 PM 01/05/26.

User Feedback

- What is good about the original design/layout?
- 3 responses
- It looks good and has an easy to read layout
 - Enough space for each element - not cluttered
 - It's simplistic and easy to navigate

What is bad about the original design/layout?

3 responses

It is quite basic

No separation from navigation buttons and main page / Only one setting

They layout isn't visually appealing

What is good about the alternate design/layout?

3 responses

It includes more detail

Not cluttered, information is together (easy to find next paragraph)

It's consistent throughout

What is bad about the alternate design/layout?

3 responses

It is harder to read and surf

Images are in the corner / not a highlight

it's too similar to the original

“What is bad about the alternate design/layout?”

Feedback: “Images are not the focal point of the site”

Change Made: Images are now more central, and the visitor's attention will be more drawn towards them.

“What is bad about the original design/layout?”

Feedback: “Range of font options are limited”

Change Made: More font options in settings added.

Add image of form(s) question and answers and charts and **Review** the website design proposals what you have learnt from the feedback and use their feedback to update your design specification documentation in light of the feedback- create new wireframe to make incorporate the feedback changes to the design you are going to build

Justification –

I have decided to select the Original design for my website because it meets the user requirements of it being easy to find key information regarding artists and event plus it being easy to navigate, every user who did the poll chose the original layout as the best one, users can view images of past events and art from artists involved which get visitors interested in participating. It also includes a google maps link of the location (Burnley) to make it easy for the visitors to access. A responsive design of the website allows anyone on any browser or device to access the website efficiently. Contact form allows users to enter information to be sent to the owner email address.

Test Table –

Test number	Purpose of test	Expected Result	Actual Result	Action
-------------	-----------------	-----------------	---------------	--------

1	All images load correctly	All images load correctly on the page in the correct size and format	All images loaded correctly	No action needed
2	Navigation bar links work	Each navigation link takes the user to the correct page	All navigation links work correctly	No action needed
3	Contact form submits correctly	User information is entered and sent correctly	Contact form does not submit correctly	Contact form submits correctly using Formspree
4	Google map link works	The map opens correctly and shows the Burnley location	Google maps link does not work	Checked and corrected the Google Maps link
5	Website works on mobile devices	Layout adjusts correctly on smaller screens	Website works on mobile devices	No action needed
6	Website works on different browsers	Website displays and functions correctly on Chrome, Edge and Firefox	Website worked correctly across browsers	No action needed

Test Table –

7	Buttons function correctly	All buttons perform the correct action when clicked	All buttons function correctly	No action needed
8	Text is readable	Fonts, colours and spacing make content easy to read	Text is not hard to read	No action needed
9	Media loads correctly	Media content displays without errors	Media loaded correctly	No action needed
10	Pages load correctly	All pages open without broken links or missing content	All images missing load correctly	No action needed

Test number	Purpose of test	Expected Result	Actual Result	Action
3	Contact form submits correctly	User information entered and sent correctly	Contact form did not submit correctly	Added Formspree integration
3a	Retest contact form	Contact form submits correctly	Contact form now submits correctly	No action needed

4	Google Maps link works	Map opens correctly	Google Maps link did not work	Corrected Map URL
4a	Retest Google Maps link	Google Maps opens correctly	Google Maps link now work correctly	No action needed

```

Usability -

The website was tested thoroughly to make sure that it is easy to navigate and that it meets the client and user requirements. Testing included navigation links, mobile responsive designs, browser compatibility, contact forms and google maps integration. Feedback was collected on the layout and successfully adapted in response to it. The contact form had originally failed to submit correctly, so formspree integration was added to fix the issue. Google Maps Link was incorrect so was corrected after testing. These improvements helped to make the website more reliable and user friendly.

Optimisation -

The website was polished and optimised following the results from testing and user feedback. Images were resized and organised to increase loading speeds and responsiveness across all devices. Navigation links and buttons were checked to ensure that they functioned correctly. The contact form was improved using Formspree integration so that users could successfully send emails regarding any event enquires, etc to the organisation's email. The Google Maps link was also corrected so that visitors were easily able to access the Burnley location. These changes improved the overall functionality, accessibility and performance of the site.

Evaluation -

The website successfully meets the client and user requirements by providing an active online presence for the Burnley Community's Art Festival. Users can navigate between pages easily, access information about artists and events and use the contact form and Google Maps feature. The website is visually appealing and easy to use which makes it suitable for the target audience.

The responsive design allows the website to be used effectively on multiple different devices and browsers, improving the accessibility for users. User feedback also showed that the original design was preferred rather than the alternate design, with all users choosing the original layout because it is the easiest to navigate and more visually appealing.

Compared to the alternate design, the final version uses images a lot more efficiently and effectively and provides a cleaner layout for users. Feedback collected during testing helped improve the website further by correcting issues with the Formspre and Google Maps integration.

One improvement that could be made next time or in the future would be adding more interactive features to the site like image gallery slideshows. Additional accessibility features like settings and animations could also improve the user experience further. Overall, the final website is functional, user-friendly, and suitable for promoting the Burnley Community's Art Festival

Review Of Skills -

During the development of this website, I improved my HTML and CSS skills by creating responsive layouts, navigation systems and interactive features like Contact Form and Google Maps Embed. I demonstrated problem-solving skills during testing by identifying issues affecting the contact form and Google Maps Embed link and solving them successfully.

If I was tasked with this project again, I would spend more time improving advanced styling and adding more to my test table and more images to the website.
